

Note

This section only applies if you are running the workshop in your **own account**. [Click here](#) if you are participating in an AWS guided event.

Prerequisites

For this workshop, you will need:

- An AWS account.
- [AWS CDK](#) installed on your local machine. Please also check the [prerequisites](#) for AWS CDK.
- [Visual Studio Code](#) installed on your local machine.
- [Python](#) installed on your local machine.
- [Kiro - Visual Studio Code Extension](#) installed on your VSCode installation.
- [Kiro - CLI](#) installed on your local machine.

Note

The AWS role used will need sufficient permissions to interact with AWS resources used in the workshop.

Next, you will configure your Integrated Development Environment (IDE), before setting up an AWS Builder ID.
