

Prerequisites

-  **Important**
- Use Kiro CLI for this section
 - Complete [Setting Up Kiro](#)

Use Kiro to Analyze AWS Costs for AWS Resources in Your AWS Environment

Let's use Kiro CLI to review costs in your AWS account.

1. In your VSCode Server environment, create a new folder to separate context from other files inside the VSCode Server:

```
1 cd /Workshop
2 mkdir financial
3 cd financial
```

2. Within the VSCode Server Environment, start Kiro CLI by running:

```
1 kiro-cli chat
```

3. Input a prompt to create your desired inventory report. Feel free to add or remove fields as needed:

EN FULL PROMPT

TH FULL PROMPT

```
1 Create a comprehensive AWS cost optimization report for my current AWS account with the following requirements:
2
3 1. **Cost Analysis & Data Collection**:
4 - Analyze my current AWS account costs using get_pricing_from_api only
5 - Get detailed cost breakdown by service for the last 3 months
6 - Identify cost trends, increases, and optimization opportunities
7 - Calculate potential savings with specific recommendations
8
9 2. **Generate Two Report Formats**:
10 - **Markdown Report**: Detailed technical analysis with cost breakdowns, recommendations, and action items
11 - **HTML Report**: Interactive dashboard using CloudScape design framework
12
13 3. **HTML Report Requirements**:
14 - Use AWS CloudScape design system for professional AWS-native styling
15 - Integrate Chart.js for interactive data visualizations including:
16 * Overall monthly cost trend line chart
17 * Service cost breakdown doughnut/pie chart
18 * Month-over-month cost changes bar chart
19 * Top 5 services multi-line trend chart
20 - Include executive summary with key metrics
21 - Color-coded service cards showing cost trends and optimization levels
22 - Detailed action items with priority levels (High/Medium/Low)
23 - Professional table layouts for detailed cost analysis
24 - Ensure correct indentation
25
26 4. **Key Analysis Components**:
27 - Identify services with significant cost increases (>50%)
28 - Calculate potential savings from Reserved Instances
29 - Provide immediate, short-term, and long-term recommendations
30 - Include cost optimization best practices
31 - Highlight critical alerts for services requiring immediate attention
32
33 5. **Visualization Requirements**:
34 - Use real AWS cost data from my account
35 - Interactive tooltips with detailed cost information
36 - Color-coded trends (red for increases, green for decreases)
37 - Responsive design that works on different screen sizes
38 - Professional AWS color palette and typography
39
40 6. **Output Files**:
41 - Save markdown report as `aws_cost_optimization_report.md`
42 - Save HTML report as `aws_cost_optimization_report.html` in my current directory
43 - Ensure HTML file includes all necessary CDN links for Chart.js and CloudScape
44
45 The final deliverable should be a production-ready cost optimization dashboard that provides both high-level insights and actionable recommendations for immediate co
```

4. Open the report by right-clicking the report file > Open Preview

5. Sample Report
