

In this lab, you'll uncover powerful cost optimization insights by leveraging Kiro CLI to break down and analyze your AWS spend. Learn how to explore cost trends, identify top spending services, and track usage across regions, accounts, and resource tags — all using natural language queries within Kiro. Guided by the AWS Well-Architected Framework's cost optimization pillar, this session will walk you through practical exercises that include generating service-level cost breakdowns, filtering by projects or teams using tagging, and forecasting future costs based on historical usage. You'll also discover how to use Kiro to detect unusual spikes in your billing data, identify idle resources, and receive actionable recommendations to reduce waste. Whether you're managing a single account or operating within AWS Organizations, this workshop equips you with the skills to build custom reports, understand cost drivers, and take immediate actions to optimize your cloud budget.
