Event ends in 1 day 4 hours 2 minutes.

Objective

Create a production-ready agent that combines all learned parameters for a real-world scenario.

Instructions

Step 1: Create Comprehensive Production Agent

```
cat > .kiro/agents/production-fullstack.json << 'EOF'
{
  "name": "production-fullstack",
  "description": "Production-ready full-stack development agent",
  "prompt": "You are a senior full-stack developer with comprehensive project knowledge, AWS expertise, and security awareness. You help with development tasks while maint
  "mcpServers": {
    "aws-knowledge-mcp-server": {
      "command": "uvx",
      "args": [
        "mcp-proxy",
        "--transport",
        "streamablehttp",
        "https://knowledge-mcp.global.api.aws"
      ],
      "timeout": 30000
    },
    "awslabs.aws-pricing-mcp-server": {
      "command": "uvx",
      "args": ["awslabs.aws-pricing-mcp-server@latest"],
      "env": {
        "FASTMCP_LOG_LEVEL": "ERROR",
        "AWS_REGION": "us-east-1"
      },
      "timeout": 30000
    }
  },
  "tools": [
    "read",
    "write",
    "shell",
    "@aws-knowledge-mcp-server",
    "@awslabs.aws-pricing-mcp-server"
  ],
  "allowedTools": [
    "read",
    "@aws-knowledge-mcp-server/aws___search_documentation",
    "@awslabs.aws-pricing-mcp-server/get_pricing"
  ],
  "toolAliases": {
    "@aws-knowledge-mcp-server/aws___search_documentation": "aws_docs",
    "@awslabs.aws-pricing-mcp-server/get_pricing": "aws_pricing"
  },
  "resources": [
    "file://README.md",
    "file://package.json",
    "file://docs/**/*.md",
    "file://src/**/*.js",
    "file://.kiro/agent-activity.log"
  ],
  "hooks": {
    "agentSpawn": [
      {
        "command": "./scripts/agent-startup.sh"
      }
    ],
    "userPromptSubmit": [
      {
        "command": "./scripts/log-interaction.sh \"$USER_PROMPT\""
      }
    ]
  },
  "toolsSettings": {
    "write": {
      "allowedPaths": [
        "src/**",
        "docs/**",
        "tests/**",
        "scripts/**"
      ],
      "deniedPaths": [
        ".env*",
        "secrets/**",
        ".aws/credentials",
        "node_modules/**"
      ]
    },
    "shell": {
      "allowedCommands": [
        "npm.*",
        "yarn.*",
        "git status",
        "git add.*",
        "git commit.*",
        "git diff.*",
        "ls.*",
        "cat.*"
      ],
      "deniedCommands": [
        "rm -rf.*",
        "sudo.*",
        "chmod 777.*",
        "git push.*origin.*main",
        "npm publish.*"
      ]
    }
  }
}
EOF
```

Step 2: Test Complete Integration

1. Start custom agent

```
kiro-cli chat --agent production-fullstack
```

2. Test comprehensive scenarios:

```
"Analyze the project structure and suggest improvements"
"Find AWS Lambda best practices and estimate costs for 1M requests"
"Create a new utility function following project standards"
"Use shell to check git status and then commit changes"
"Research S3 pricing and create a cost analysis document"
```

Step 3: Verify All Features

1. Hooks executed

```
cat .kiro/agent-activity.log
```

2. List all agents created

```
kiro-cli chat
```

```
/agent list
```

3. Test tool aliases

```
kiro-cli chat --agent production-fullstack
```

Test aliases:

```
"Use aws_docs to search for S3 information"
"Use aws_pricing to get EC2 costs"
"Use shell to list files"
```

Verification

- ✅ All parameters work together seamlessly
- ✅ MCP integration functions correctly
- ✅ Security restrictions are enforced
- ✅ Tool aliases improve usability
- ✅ Hooks provide automation
- ✅ Resources provide project context
- ✅ Agent behaves according to prompt

Key Learnings

- All agent parameters can be combined effectively
- Production agents require careful balance of functionality and security
- Comprehensive configuration enables powerful, specialized AI assistants
- Parameter interaction creates sophisticated agent behaviors
- Real-world agents benefit from multiple integrated features
