

In this section, you'll set up Kiro in your development environment. Kiro is an AI-powered assistant that helps you build applications faster by providing code suggestions, answering questions, and helping with various development tasks.

## Choose Your Setup Option

Kiro offers two setup options to meet different needs and organizational requirements:

### Option 1: Kiro Pro Subscription

**Best for:** Organizations and teams that need advanced features, centralized management, and enterprise-grade security.

**Features:**

- Advanced AI capabilities with higher usage limits
- Centralized user management through AWS IAM Identity Center
- Enhanced security and compliance features
- Team collaboration capabilities
- Administrative controls and usage analytics
- Integration with existing AWS organizational structure

**Requirements:**

- AWS IAM Identity Center setup in your AWS organization
- Kiro Pro Subscription
- Administrative access to configure user permissions

**Next Steps:**

- [Option 1: Kiro Pro Subscription](#)

### Option 2: Free Subscription via AWS Builder ID

**Best for:** Individual developers, learning, and getting started with Kiro.

**Features:**

- Core AI-powered coding assistance
- Code generation and suggestions
- Technical Q&A capabilities
- Basic usage limits (suitable for individual development)
- Quick setup with personal AWS Builder ID

**Requirements:**

- AWS Builder ID (free to create)
- No organizational setup required
- Perfect for workshops, learning, and individual projects

**Next Steps:**

- [Option 2: Free Subscription via AWS Builder ID](#)

## Additional Setup

After completing either option above, you may also want to:

- [Running on Your Machine](#)

**Recommendation**

For this workshop, we recommend **Option 2: Free Subscription via AWS Builder ID** as it's the quickest way to get started and doesn't require organizational setup.
