

Prerequisites

Important
Use **Kiro CLI** for this section

1. Input a prompt to create a Sudoku web application in Terminal

1 create simple html sudoku web application and save into file

```
/help all commands • ctrl + j new lines • ctrl + k fuzzy search
> create simple html sudoku web application
I'll help you create a simple HTML Sudoku web application. Let's create an HTML file with JavaScript to implement a
basic Sudoku game.
⌘ Thinking...
```

2. Press **t** or **y** to allow Kiro to execute the command to create file

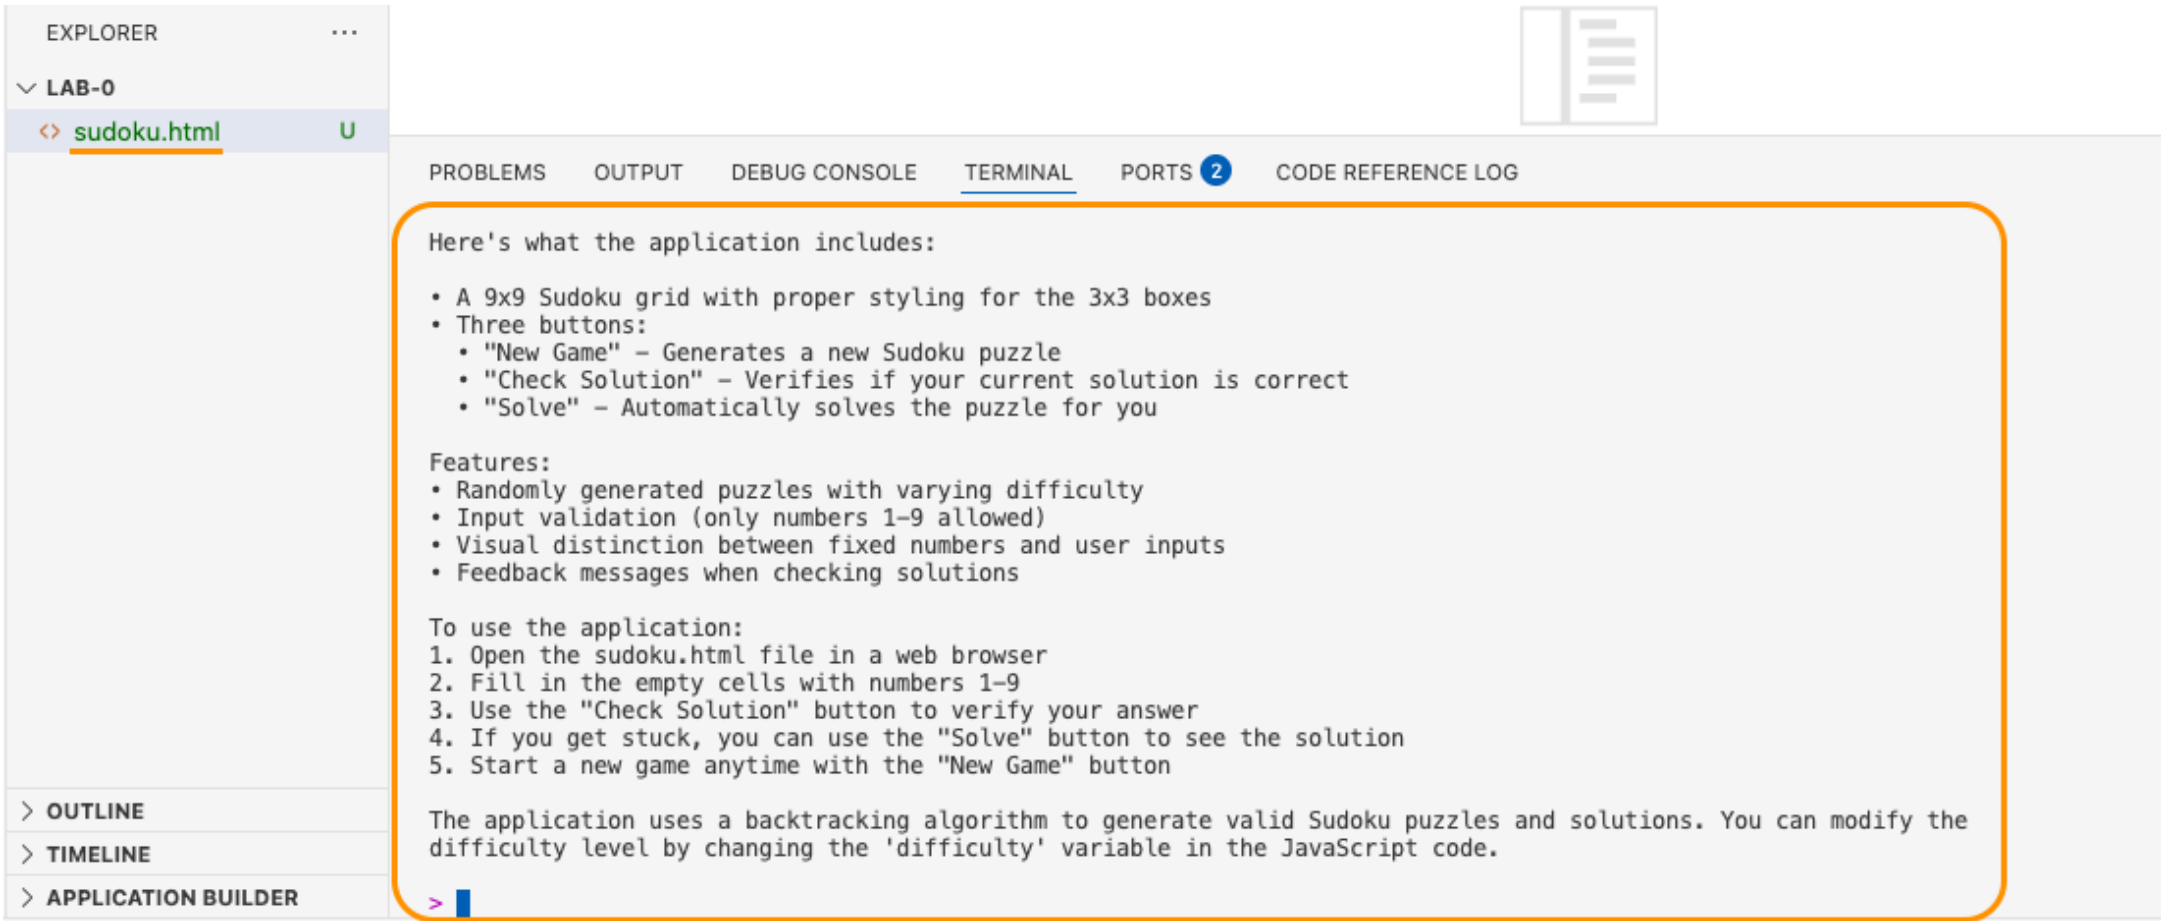

```
+ 383: </script>
+ 384: </body>
+ 385: </html>

Allow this action? Use 't' to trust (always allow) this tool for the session. [y/n/t]:
t
```

Important
After pressing **t**, the command will be executed without asking the user for confirmation.

For example, it's not recommended to set **t** for commands that could have serious consequences when executed, such as **rm** which deletes files.

3. Kiro CLI will be able to: 3.1 Create an HTML file which you can see in the Project Explorer. 3.2 Describe the application details and usage.

4. Open the HTML file and click on Show Preview

5. You will be able to see the web page and play Sudoku
