

Important
Use Kiro CLI for this section

1. Deploy the Terraform configuration to the AWS Environment

1 Deploy this Terraform configuration

Note: This deployment will take around 10 minutes to complete. Please feel free to take a break! 🍷

2. Get the Amazon CloudFront URL

Kiro will deploy the Terraform configuration to AWS and show the Amazon CloudFront URL in the output terminal. URL format: xxxxxxxx.cloudfront.net

Copy the Amazon CloudFront URL from the output

Outputs:

```
cloudfront_domain_name = "dswogr5w530ez.cloudfront.net"
cloudfront_url = "https://dswogr5w530ez.cloudfront.net"
s3_bucket_name = "sudoku-app-bucket-1757752635"
```

⋮
● **Completed in 232.541s**

> Successfully deployed! The Terraform infrastructure has been created with:

Resources Created:

- ✔ Private S3 bucket: **sudoku-app-bucket-1757752635**
- ✔ CloudFront distribution with Origin Access Control
- ✔ S3 bucket policy for secure access
- ✔ Sudoku HTML file uploaded to S3

Access Your Sudoku Game:

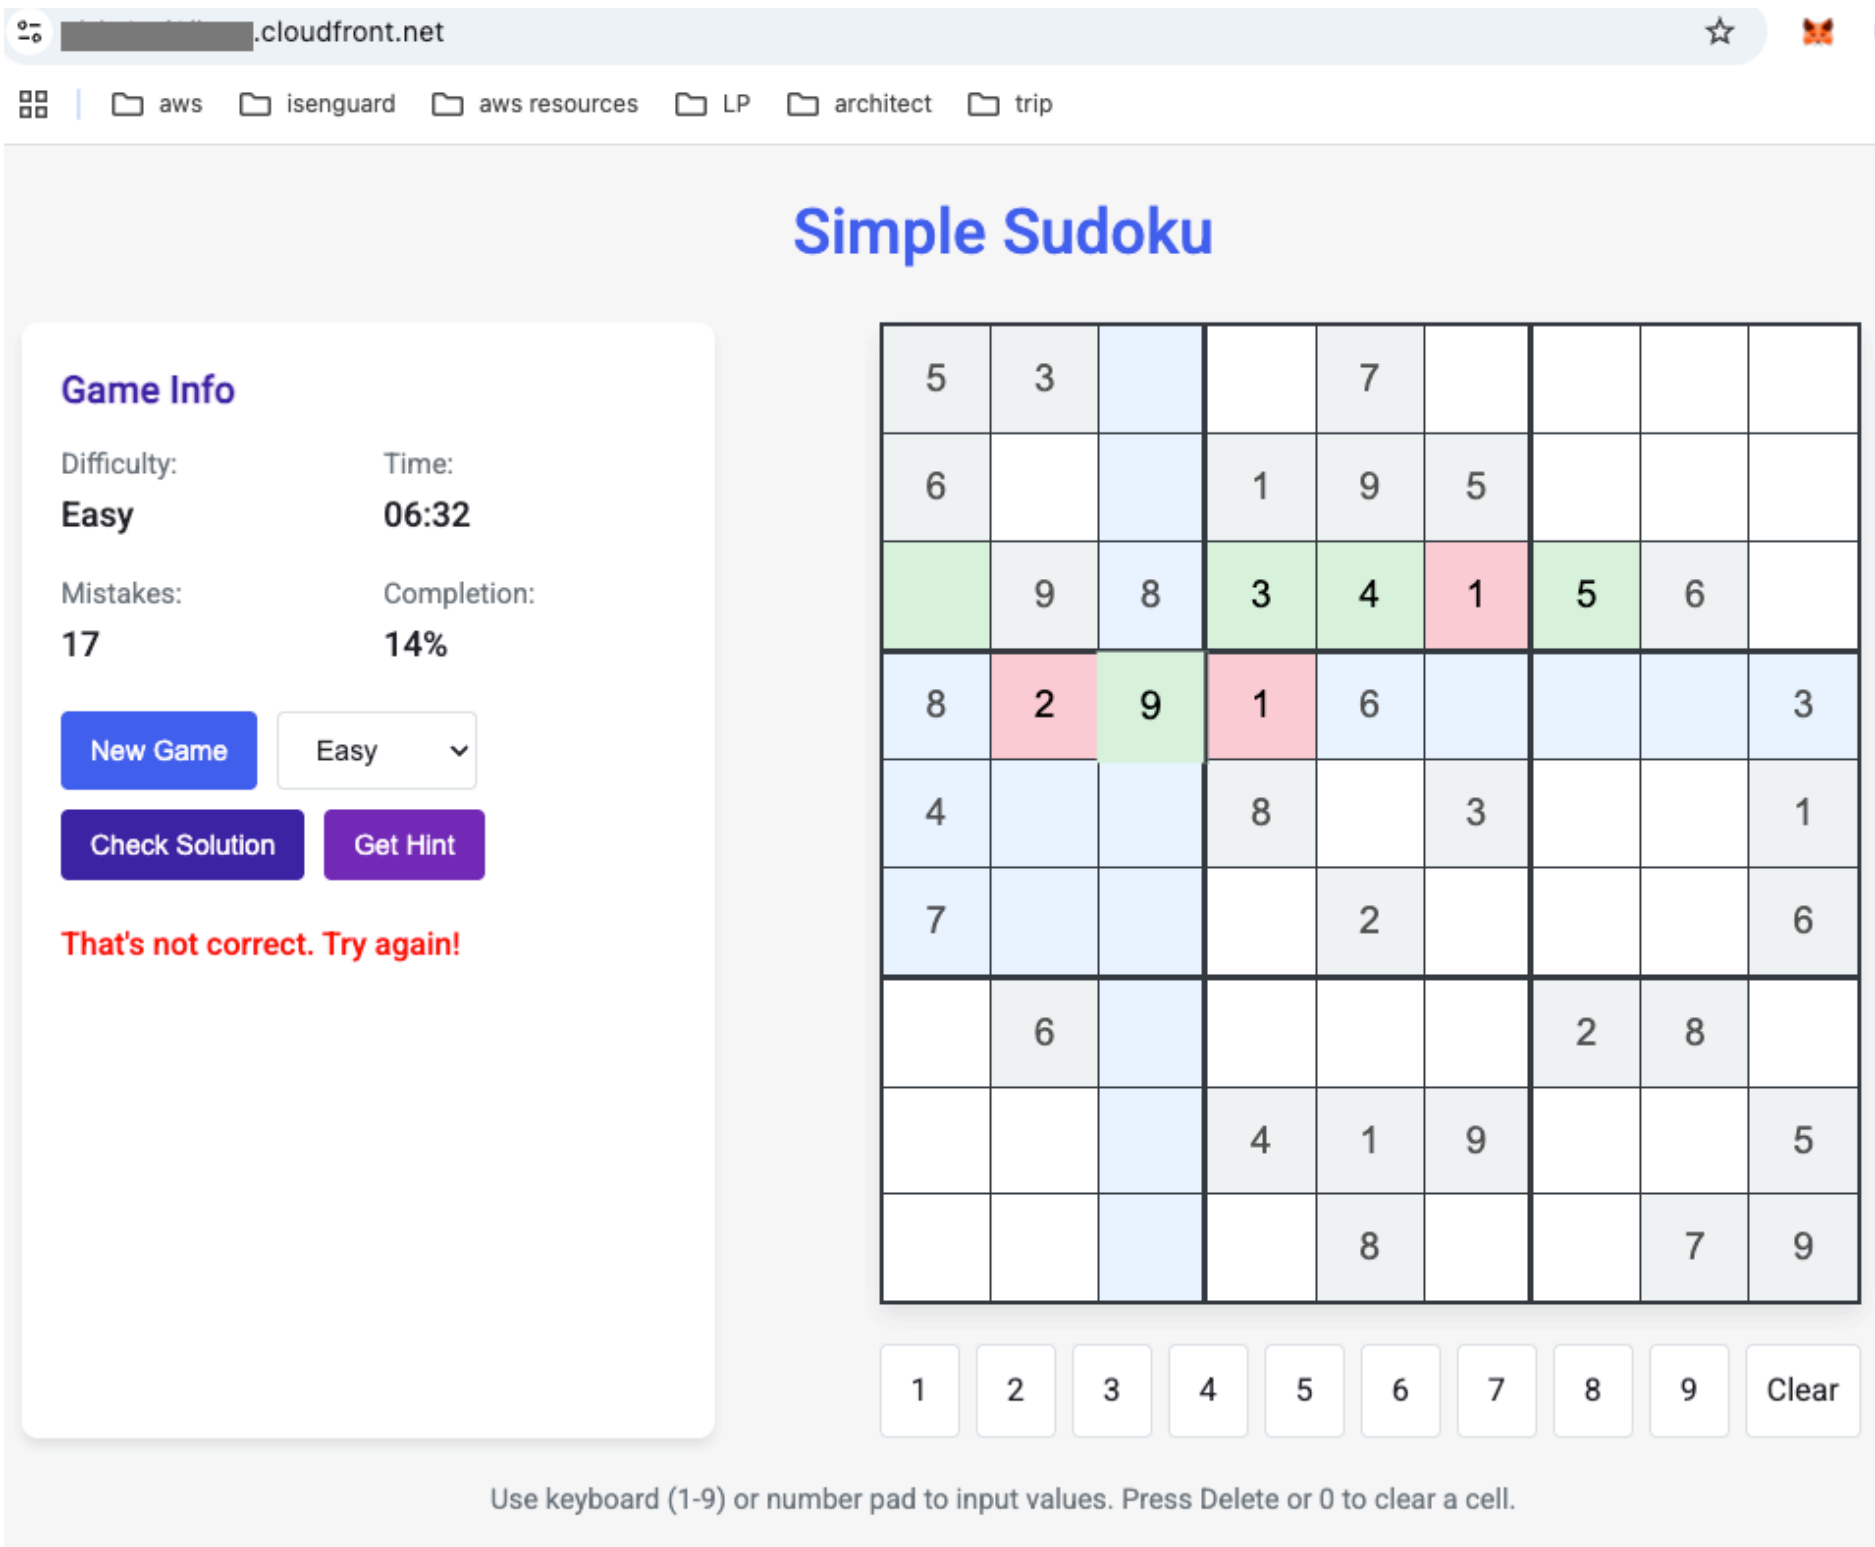

🔗 **https://dswogr5w530ez.cloudfront.net**

The Sudoku game is now live and accessible via the CloudFront URL. The S3 bucket remains private while CloudFront securely delivers the content with HTTPS, compression, and global edge caching for optimal performance.

> |

3. View the web application in the web browser

Open the Amazon CloudFront URL in a web browser

Troubleshooting

If you get an Access Denied error:

This XML file does not appear to have any style information associated with it. The document tree is shown below.

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Error>
  <Code>AccessDenied</Code>
  <Message>Access Denied</Message>
  <RequestId>36XXXXXXXXHEJ17</RequestId>
  <HostId>SzJWintJ4XXXXXXXXXUNFxU0d3qGFpON/XG9seYsk00T46ACz4bVqyN4mBXXXXXXt8Lkdprnpk=</HostId>
</Error>
```

You can copy the error from the web page and ask Kiro to fix it!

```
1 I got an error as below
2
3 This XML file does not appear to have any style information associated with it. The document tree is shown below.
4 <Error>
5 <Code>AccessDenied</Code>
6 <Message>Access Denied</Message>
7 <RequestId>36XXXXXXXXHEJ17</RequestId>
8 <HostId>SzJWintJ4XXXXXXXXXUNFxU0d3qGFpON/XG9seYsk00T46ACz4bVqyN4mBXXXXXXt8Lkdprnpk=</HostId>
9 </Error>
10
11 in https://xxxxxxxxxxfs67.cloudfront.net
12
13 Please fix it.
```

After Kiro CLI manages to fix the error, please refresh the page again. You should be able to see your web application accessible in the web browser.
