

 **Important**
Use Kiro **CLI** for this section

Clean Up Terraform Resources

1. Delete all resources created by Terraform on AWS

```
1  Delete all resources that were created by this Terraform configuration in my AWS Account
```

Clean Up Local Files

2. Delete all files

```
1  !rm -rf *
```

3. Clear the conversation history

```
1  /clear
```

4. Clear all files from current context

```
1  /context clear
```

Conclusion

Congratulations! You've successfully:

- 1. Set up Kiro in your development environment (both IDE and CLI)
- 2. Created a basic web application with Kiro's assistance
- 3. Created documentation as a README file
- 4. Enhanced your application with advanced prompting techniques
- 5. Deployed your application to AWS using Terraform
- 6. Created an architecture diagram to show your stack

Congratulations! You now have a fully functional Sudoku web application deployed on AWS infrastructure and have an architecture diagram ready!
