

This section will guide you through deploying your application using Terraform. You'll create infrastructure that uses Amazon S3 for hosting your static files and Amazon CloudFront for content delivery.

What You'll Learn

- How to create AWS infrastructure using Terraform
- How to deploy resources to AWS
- How to explore and understand your deployed resources
- How to create architecture diagrams

Prerequisites

Note

Complete [Lab 1 - Setting Up Kiro](#)

Steps

Follow these steps in order:

1. [Create Terraform Code](#)
2. [Deploy AWS Resources](#)
3. [Explore AWS Resources](#)
4. [Create Architecture Diagram](#)
5. [Clean Up Resources](#)
