

In this hands-on workshop, you'll explore how to streamline your AWS cloud operations using Kiro CLI 🚀 You'll learn to leverage Kiro's capabilities to analyze and enhance your cloud infrastructure, focusing on CloudFormation stack management and VPC configurations. Through practical exercises, you'll use Q to interpret CloudFormation templates, examine VPC networking components, implement VPC flow logs for network monitoring, create insightful flow log visualizations, and optimize your network architecture by adding VPC endpoints. This lab demonstrates how Kiro can simplify complex cloud operations tasks and improve your infrastructure management efficiency ✨

The stack that we will use today can be found [here](#)
