

Generate a comprehensive HTML report combining architecture analysis, pricing estimates, and recommendations with before/after diagrams for easy sharing and documentation.

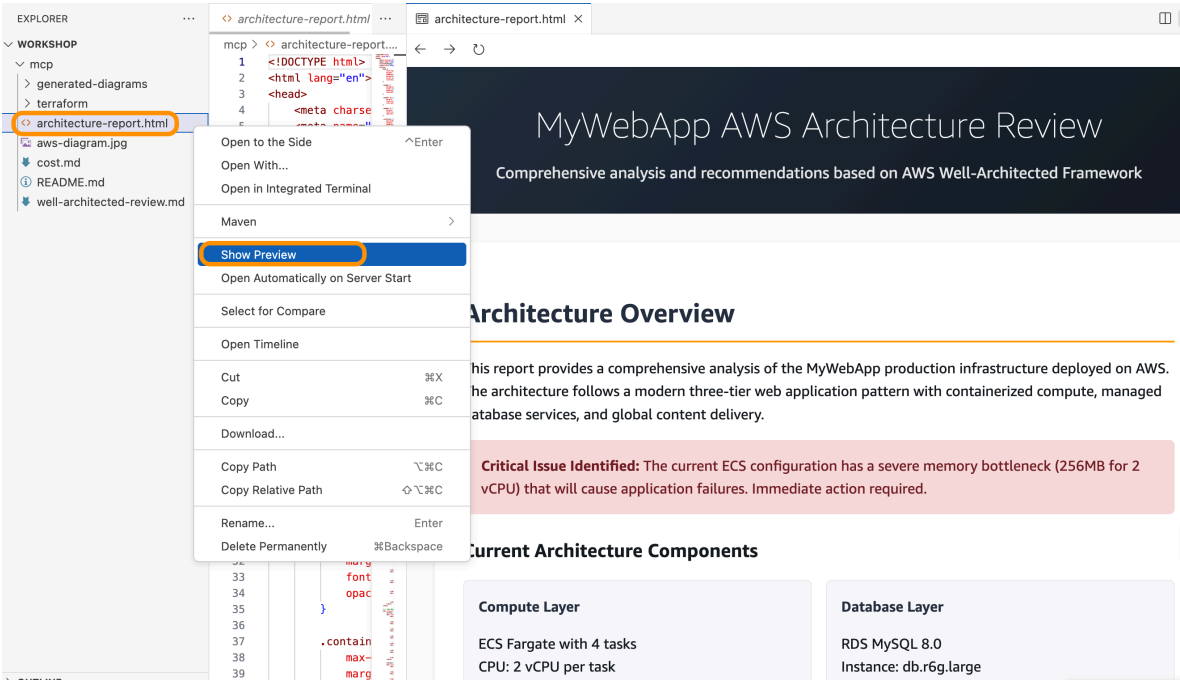

At this stage, we will compile all the obtained information into a report to make it convenient for reading or sharing with others.

In the prompt below, there will be instructions to create an additional diagram based on the recommendations made in the previous step to show a before and after comparison, with specified style and content for the desired report.

- 1
- Create an HTML report named `architecture-report.html` that includes the architecture review and the pricing analysis.
- 2
- Also create the new diagram based on the recommendations, put previous and proposed diagram in the report for comparison.
- 3
- Use CloudScape design as the template. The web page must look clean, professional and easy to read.
- 4
- Here are the topics for the report.
- 5
- Architecture overview,
- 6
- Key metrics, Infrastructure components,
- 7
- Network configuration, cost analysis,
- 8
- Cost breakdown,
- 9
- Recommendations and conclusion

The result will be a report in HTML file format, which we can save as a PDF.

The reporting method in the report section can be applied to other use cases, such as analyzing data from Trust Advisor and summarizing it into a report, analyzing VPC flow logs, or even CloudTrail logs, etc.

Done!

Quit Kiro CLI and delete MCP Server Configuration and move on to the next section

- 1
- /quit
- 2
- `rm -rf ~/.kiro/settings/mcp.json`

Summary

From the example above, we can see that we can use multiple MCP servers together to create what we need. For instance, in the case of creating a report like in the example entirely by ourselves, it might take several hours or days. But with the capabilities of Kiro CLI and MCP servers, we can help create or modify what we need in a short time. Currently, MCP servers are widely used, and AWS itself provides official MCP servers to choose from according to suitability, to help increase work efficiency.
