

Important

- Use Kiro **CLI** for this section
- Complete the [Setting Up Kiro](#) section

MCP with Kiro CLI Overview

In this section, you'll learn how to use Model Context Protocol (MCP) servers with Kiro CLI to create a complete workflow from diagram creation to deployment and analysis.

What you'll accomplish:

1. **Setup MCP Server** - Configure AWS MCP servers for enhanced capabilities
2. **Create the diagram** - Transform hand-drawn sketches into AWS architecture diagrams ****Infrastructure as Code for deployment** - Generate and validate Terraform code ****Pricing Analysis** - Estimate costs before deployment ****Solution Review** - Validate against AWS Well-Architected Framework ****Compile all information into a report** - Generate comprehensive documentation

Prerequisites

- VS Code Server environment (provided in workshop)
- Basic understanding of AWS services
- Familiarity with command line interface

Learning Objectives

By the end of this section, you will be able to:

- Configure and use multiple MCP servers with Kiro CLI
- Convert conceptual diagrams into formal AWS architecture diagrams
- Generate Infrastructure as Code using AI assistance
- Perform cost analysis and architecture reviews
- Create comprehensive reports combining multiple analyses

Let's get started with setting up your MCP servers!
