

In this lab, you'll dive deep into strengthening your AWS account security using Kiro CLI capabilities. Learn how to perform comprehensive security assessments aligned with the AWS Well-Architected Framework's security pillar, covering identity management, infrastructure protection, data security, incident response, and compliance requirements. Through practical exercises, you'll discover how to use Kiro to analyze CloudFormation templates for security vulnerabilities, receive automated remediation suggestions, and implement security best practices. The workshop will guide you through establishing security baselines across your AWS accounts, including implementing least privilege access, encrypting sensitive data, enabling comprehensive logging and monitoring, and configuring security groups and network ACLs effectively. You'll learn to leverage Kiro's intelligent recommendations to enhance your security posture and maintain compliance with industry standards, making your cloud infrastructure more resilient against potential threats. 🛡️ 💻
