

Welcome to the Advanced Kiro for Operations Demo! This demonstration showcases how Kiro can be leveraged for real-world operational scenarios through video presentations.

Demo Overview

This section contains four video demonstrations that showcase Kiro's operational capabilities:

1. 🚨 Incident Troubleshooting

AI-assisted troubleshooting for AWS and on-premises infrastructure incidents.

2. 💰 Cloud Cost Optimization

AI-powered cost analysis and optimization recommendations for AWS environments.

3. 🔒 Security Outlier Detection

SOC analyst project for detecting security violations and baseline deviations using CIS benchmarks.

4. 🏗️ Visio to Terraform Conversion

Infrastructure as Code (IaC) project for converting visual diagrams into Terraform configurations.

Key Features Demonstrated

- **AI-Powered Analysis:** Leverages Kiro for intelligent operational insights
- **Multi-Domain Coverage:** Spans troubleshooting, cost optimization, security, and infrastructure
- **Practical Scenarios:** Real-world use cases with comprehensive demo environments
- **Best Practices:** Follows AWS Well-Architected Framework principles

Select any demonstration above to watch the video tutorials and see Kiro in action!
