

For Complete Beginners:

1. **Start with Vibe Coding** - it's more approachable and gives quick results
2. **Begin with simple ideas** - "Build me a simple website about my hobby"
3. **Don't worry about making mistakes** - you can always start over
4. **Ask lots of questions** - Kiro can explain what it's doing

For Those Ready for More Control:

1. **Try Spec Coding** when you have a clear vision
2. **Take time to think through requirements** before starting
3. **Review specifications carefully** before approving implementation
4. **Use the documentation** that spec coding creates

For Business Users:

1. **Use Vibe Coding for prototypes** and testing ideas
2. **Switch to Spec Coding for production applications**
3. **Consider security and compliance requirements** early
4. **Plan for maintenance and updates** from the beginning
