

The Foundation phase establishes the groundwork for your entire chatbot project. This section focuses on project setup, configuring advanced Kiro features, gathering comprehensive requirements, and designing the system architecture.

What You'll Learn

In this foundation phase, you'll:

- **Set up your project structure** with proper organization and tooling
- **Configure Kiro features** including MCP servers, Agent Hooks, and Agent Steering
- **Gather detailed requirements** using structured specification techniques
- **Design system architecture** with visual diagrams and comprehensive documentation

Foundation Exercises

1. Project Setup

Learn how to create a well-structured Kiro project with proper organization, naming conventions, and initial configuration.

2. Kiro Features Setup

Configure MCP servers for AWS development, set up Agent Hooks for automation, and create Agent Steering documentation for consistent development practices.

3. Requirements Gathering

Create comprehensive functional and non-functional requirements using structured specification techniques that will guide your entire development process.

4. Architecture Design

Design your system architecture with component diagrams, data flows, and integration patterns using AWS services and best practices.

Key Benefits

By completing the Foundation phase, you'll have:

- **Clear Project Structure:** Well-organized project with proper tooling and configuration
- **Automated Workflows:** MCP servers and Agent Hooks configured for enhanced productivity
- **Comprehensive Requirements:** Detailed specifications that eliminate ambiguity
- **Solid Architecture:** Visual and documented system design that guides implementation

Prerequisites

Before starting the Foundation exercises:

- Have Kiro IDE installed and configured
- Basic understanding of AWS services
- Familiarity with serverless architecture concepts
- Access to AWS documentation and resources

Let's begin with setting up your project structure and configuring the Kiro features that will enhance your development experience throughout this workshop.
